Central monitoring system

Collect operational, energy, environmental, and security telemetry across multiple zones, centralizing data on a single system to automatically detect anomalies and dispatch real-time alerts

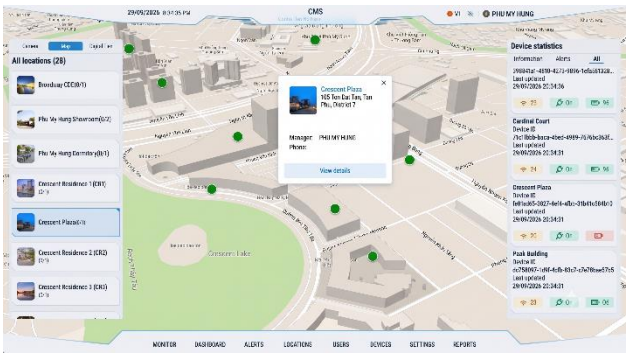

Connects seamlessly with diverse cameras and sensors, making it easy to reuse existing infrastructure

Use AI to detect abnormal events and provide early real-time alerts for safety and security risks

Integrate flexibly with leading security systems, like RISCO and Paradox

Key features

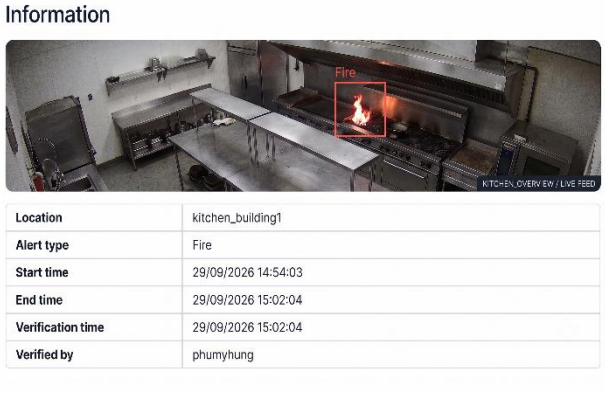

Interactive map

Monitor multiple locations on a digital map and retrieve detailed information for each area

Device management

Monitor status, alerts, and operational data from each device

Alert management

Store incident data with video evidence to support verification and response

Applications

Manufacturing plants

- Monitor machinery and conveyor operation
- Monitor workplace safety to prevent incidents
- Track fire safety systems in real time

Commercial and residential buildings

- Monitor security and detect unauthorized intrusion
- Monitor fire protection systems to ensure safety compliance
- Monitor and manage power consumption

Warehouses

- Track facility security and detect unauthorized access
- Monitor indoor air quality, temperature, and humidity
- Track fire safety systems in real time
